[4] Water (WR)

[4.4] Water Efficient Appliances Usage

Dual-Flush Toilet

Manual Faucets

Description:

Environmentally friendly sanitation technologies, such as dual-flush toilets and water-saving manual faucets, play a significant role in reducing excessive water consumption. The dual-flush toilet system allows users to select the appropriate flush volume according to their needs, thereby promoting more efficient water usage.

Meanwhile, manual faucets enable users to directly control water flow, thus minimizing wastage that frequently occurs as a result of unregulated water use. The implementation of these technologies not only supports efforts toward water resource conservation, but also contributes to the creation of a more sustainable and energy-efficient environment.

Appliance	Total Number	Total number water Efficient appliances	Percentage
Toilet	292	273	93%
Wastafel	188	152	80%
		Average Percentage	88%
